MNEMOSYNE, SUPPLEMENTS, LATE ANTIQUE LITERATURE

18 Décembre 2018

Mnemosyne Supplements, Late Antique Literature is a monograph series devoted to studies of the literature of Late Antiquity, East and West. The term 'literature' is used in two ways. It describes the topical focus of the series: monographs that explore the specifically literary qualities of late antique texts and the precise literary moves made by their authors, but also studies that bring a specifically literary methodology to their reading of texts, or that contextualize and/or historicize literary production in Late Antiquity.
