INTEGRATING DIGITAL EPIGRAPHIES (HUGH CAYLESS)

Integrating Digital Epigraphies (IDEs) is being developed as a Linked Data platform for digital epigraphy. The first round of development leverages data from partner projects including the PHI's Searchable Greek Inscriptions project, the SEG, the Claros concordance of epigraphical publication data, and epigraphy articles in JSTOR to develop a set of web services. Identifiers from any of the projects may be used to retrieve related data from any of the others. The goal of IDEs is not to be a portal or aggregator superseding partner projects, but a data hub that allows all of them to leverage each other's work.
