STANDARDS FOR NETWORKING ANCIENT PROSOPOGRAPHIES: DATA AND RELATIONS IN GRECO-ROMAN NAMES (SEBASTIAN RAHTZ AND GABRIEL BODARD)

SNAP:DRGN (snapdrgn.net) is an AHRC-funded exploratory project which aims to address the problem of linking together large prosopographies (datasets containing information about persons, names and person-like entities) managed in heterogeneous systems and formats. This paper will explore the background to and results of the work, describe the problems, the data and the tools we can produce to illustrate of the value of the data, and demonstrate research methods for working with the new material and information produced.
