## CHRONOLOGICAL CONCEPTS OF THE ANCIENT WORLD IN LINKED DATA (RAINER KOMP)

Many issues on dealing with chronological expressions in digital data are still unsolved. The presentation will be giving an overview of selected chronological concepts and representations for annual dating by eponyms known in antiquity and reasoning current efforts of standardisation and relevant projects. Focusing on Roman consulship the paper discusses approaches to identify and annotate such terms in the source texts based on TEI/epidoc conventions. Goal is to connect them to authoritative resources using Linked Data principles.
